

RIMI Statistical Consulting Request

Professor Andrew Ainsworth has a doctorate in quantitative psychology and is able to assist RIMI faculty with their statistical analyses, typically of larger data sets (upwards of 100 participants) although he can also help with issues like missing data or planning studies so that you have adequate statistical power. Professor Ainsworth receives 3 units of reassigned time per semester for this responsibility, so we will monitor his hours to make sure he's not overworked. In the meantime, if you have statistical needs, please contact Dr. Ainsworth at andrew.ainsworth@csun.edu and he will make arrangements for you to meet with him.
